

Dear FCC -

I am very unhappy to hear that the NAB has petitioned(04-160) you to prevent the broadcast of weather and traffic conditions in various parts of the US. I travel frequently in the northeast and use XM to update me on travel conditions. While these might be available to me on local radio I do not know how to easily find these stations nor when they broadcast traffic conditions. On XM I know where to do and find the updates are constant and not merely periodic.

I am at a loss as to why the FCC would consider banning this broadcast. If I did not find this service useful I would not pay the monthly fee. Let consumers vote with their wallet!!
